

# REGIMEN *for Hospitals*

## A Strategic Healthcare Initiative

In collaboration with

HIPAA presents hospital leaders with two distinct challenges: information technology compliance and behavioral compliance. Changing human behavior is one of the most difficult tasks on earth.

Created to help your organization achieve behavioral compliance with HIPAA, **REGIMEN™...For Hospitals** allows executives, managers and supervisors to put their full energy into the extraordinary leadership required to bring about fundamental organizational change.

**REGIMEN™...For Hospitals** meets four important needs:

- A quick and easy means to achieve behavioral compliance.
- The education and training programs necessary for real compliance.
- Monitoring and update services to assure you stay compliant.
- An efficient approach to operational “housecleaning.”

## Endorsed by:

**Texas Organization of Rural  
& Community Hospitals**

**Regimen™...for Hospitals** arrives on CD ROM with your facility name, address, phone, fax, CEO name, and Privacy Officer name appropriately populated into the policies and forms. You may then delete paragraphs or sections that are not applicable to your organization. Most documents are editable, but certain sections are protected to guard against inadvertent changes to their compliant language. Because Regimen is a nationally distributed product, changes may also be effected through the Regimen User’s Group.

**Regimen™...for Hospitals** sets the pace:

- Personal - backed up by friendly, knowledgeable people.
- Affordable - the most cost-effective source of help on the market.
- Current - updated to keep you on top of a moving target.
- Effective – when coupled with your leadership!
